

Routing Table Establishment

1. Obtain network topology.
2. Obtain fee model.
3. Compute candidate paths using
Edmonds-Karp algorithm.
4. Establish routing table.

Route Analysis and Parallel Payment/Probing

1. Retrieve routing table information.
2. Calculate path scores.
3. Segment paths.
4. Initiate payment.
5. Perform parallel probing.

Failed Handling

1. Wait for and obtain probe results.
2. Sort results by fee.
3. Greedily send remaining payment.
4. Obtain results.
